# Travel Guide

User App

## Sign In

Users can sign in to the Travel Guide Application through social media like Google Sign In, Facebook, Instagram, etc. The functionality for guest users is also available, who can access it without SignIn. Travel Guide comes up with Multiple languages, so users can choose as per their preference.

## Home

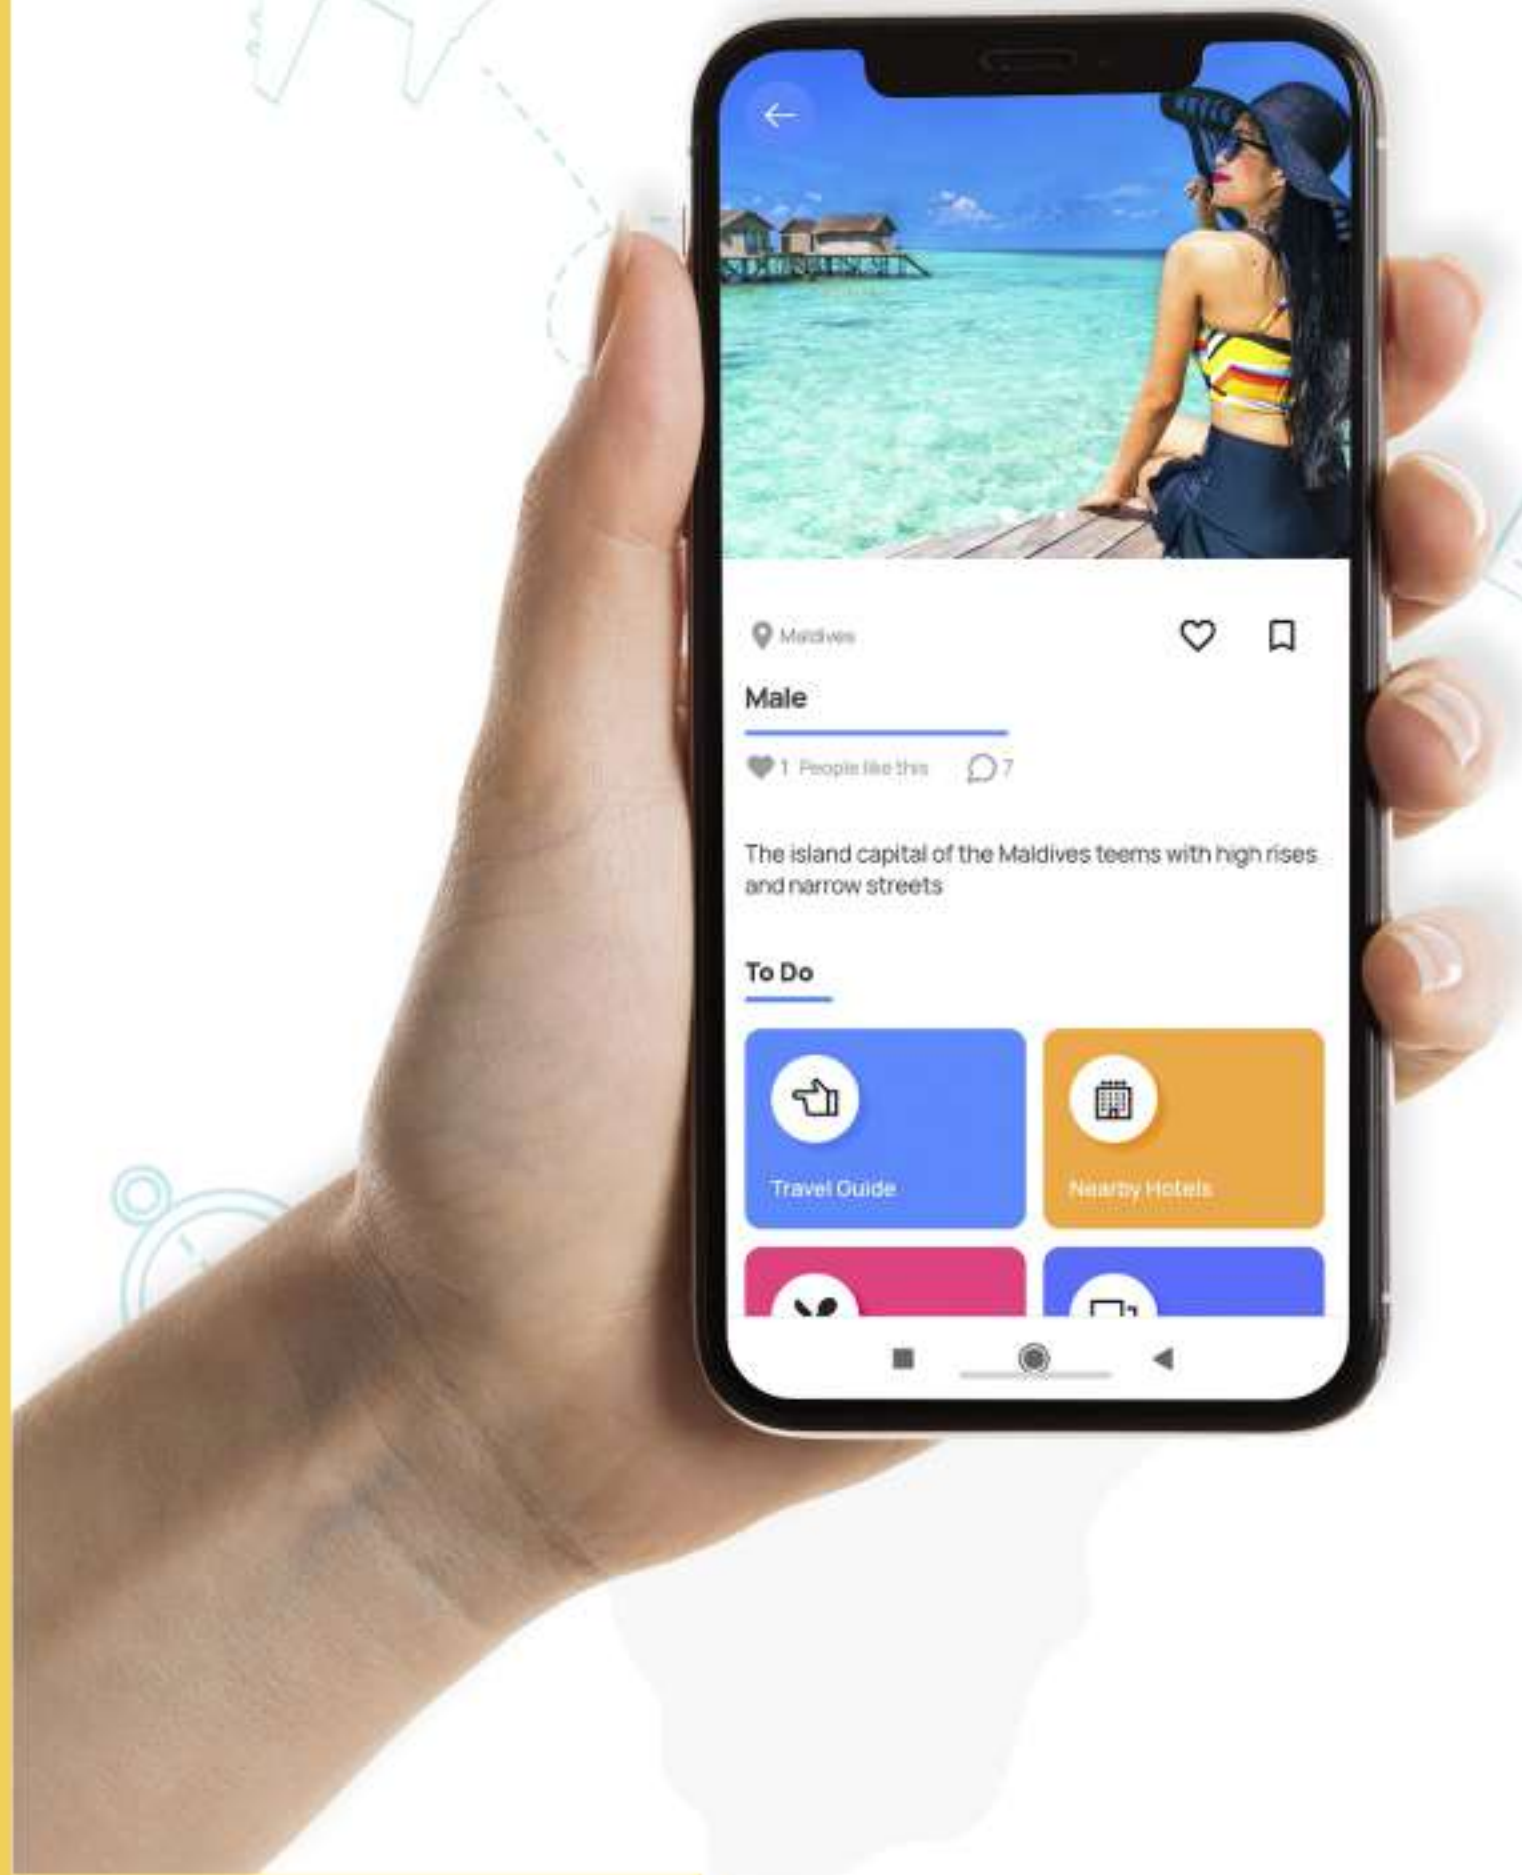

The home screen will display popular places with a slider. Users will also get recommendations on destinations and recently added places that they can find on the home screen. Users can even search for their desired places from the search bar.

# Destinations Listing

Users can checkout a list of different states and cities which are displayed in the application. Special featured states or places are also displayed on the home screen. It can be infinite scrolling screen with the list of states and cities which are updated from admin panel.

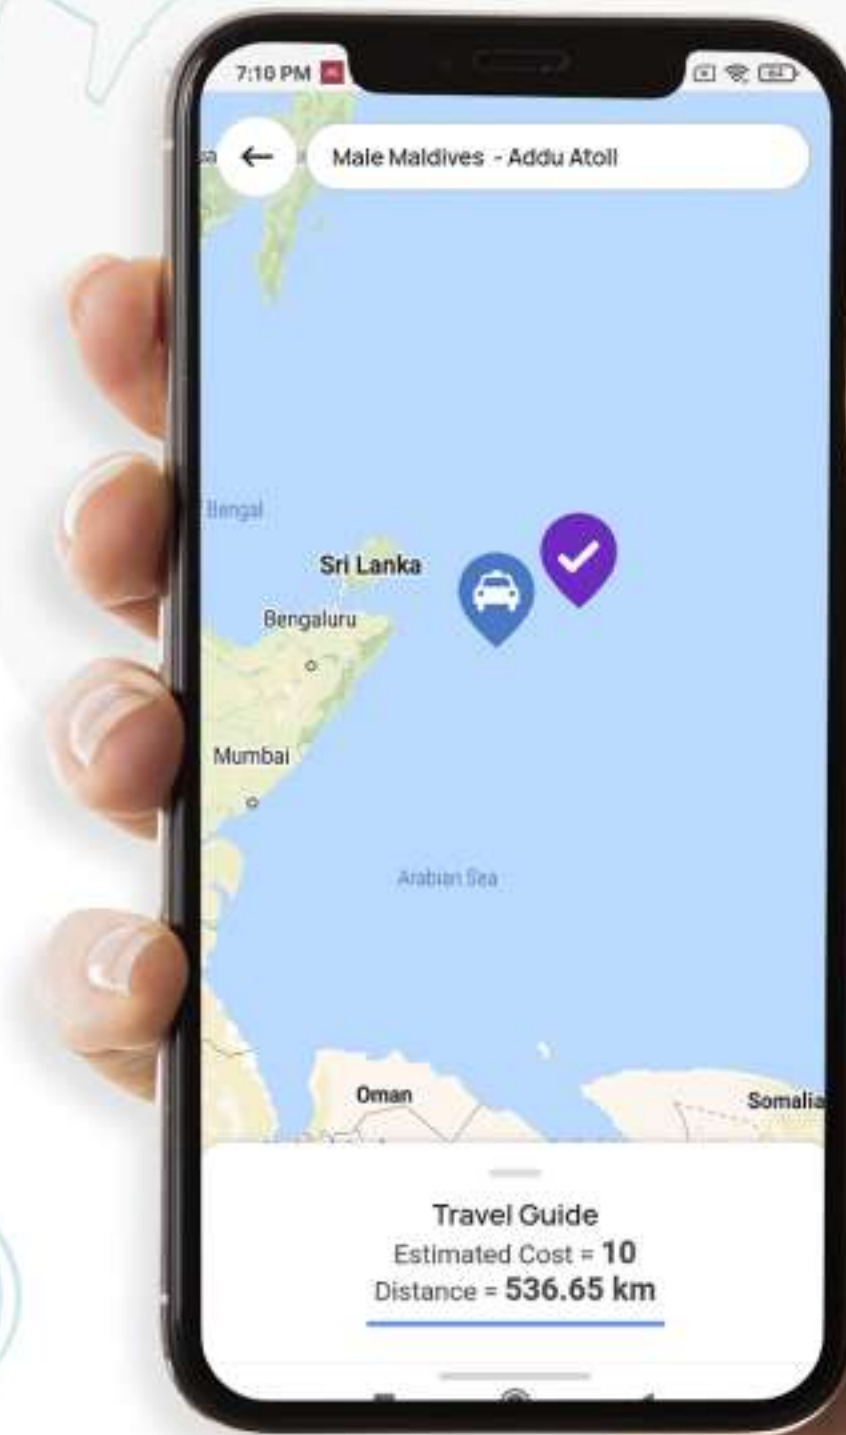

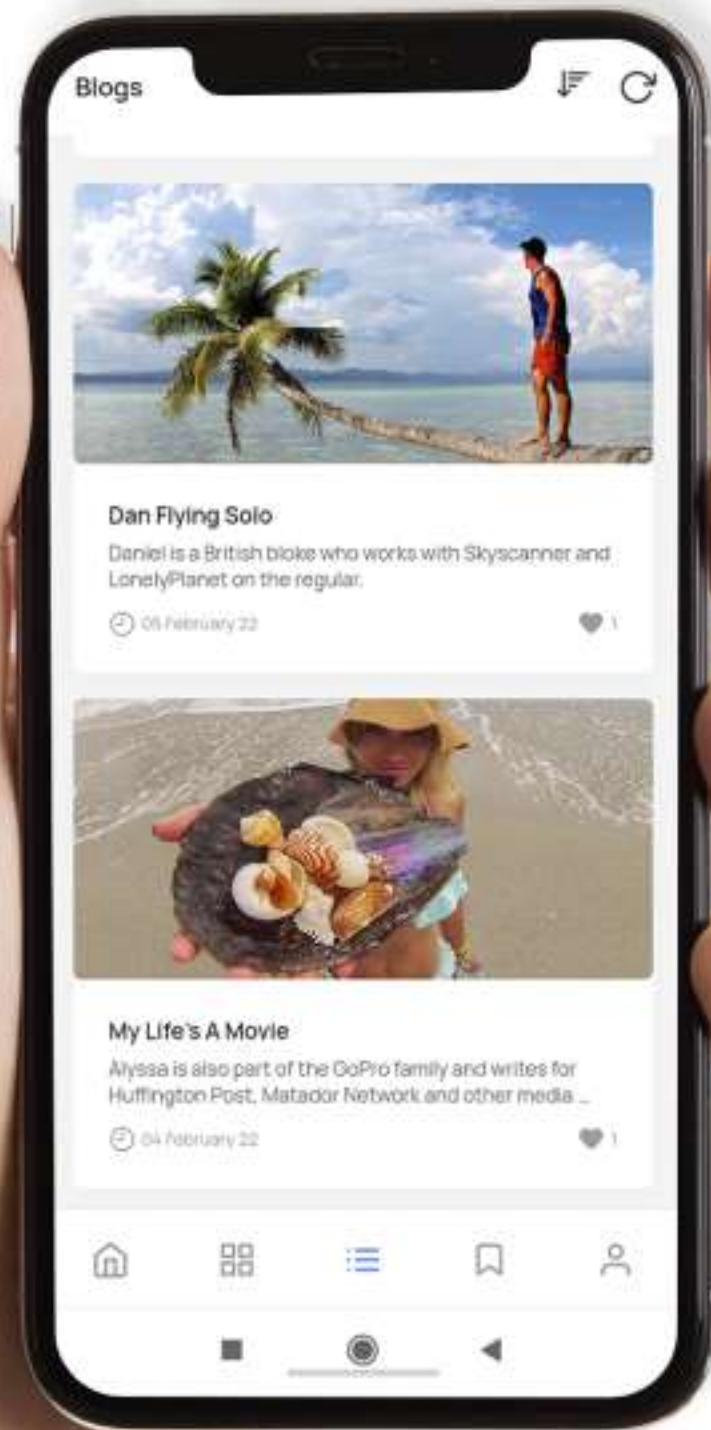

## Place Details

Users can explore more about the place with autochangeable slide images that will showcase the beautiful place. A complete information regarding the place is also provided including its ratings, main attractions, reviews and more. Relatable places are shown at the bottom that will give more ideas regarding the famous and best places of the city.

# Travel Guide

Travel Guide shows the details that will help the users to travel to the desired destination. It will provide the complete guidance with a Map view between source & destination place, estimated cost, distance between two places and step by step travel guides with cost.

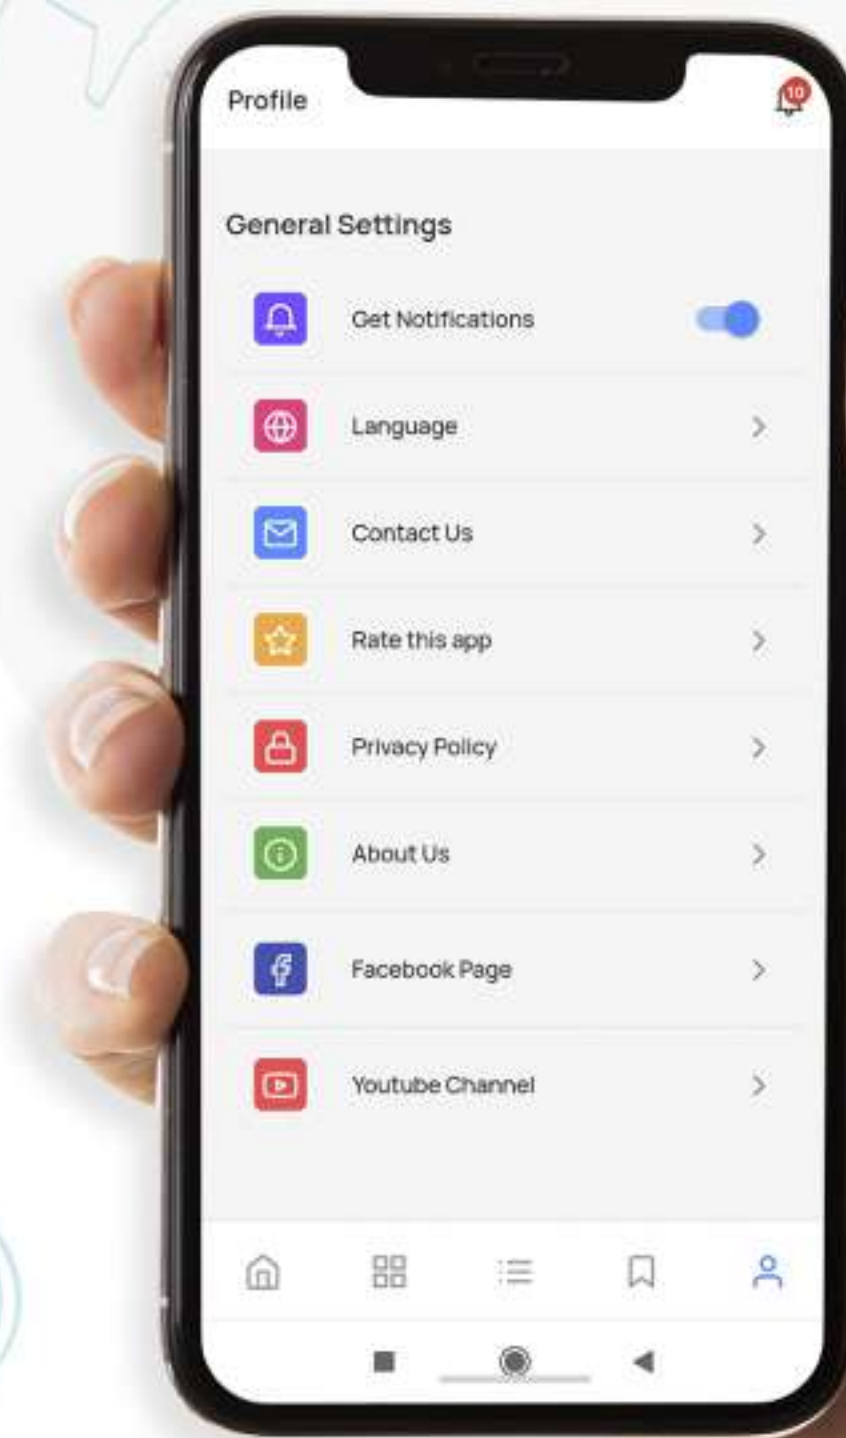

## Blogs

Blogs are an important part of travel app as they allow users to interact and get updated with more information, current news, and scenarios regarding the places. Features with Like, comment and share are also available to users, additionally sorting function will provide them with list of popular and latest blogs as per their preference.

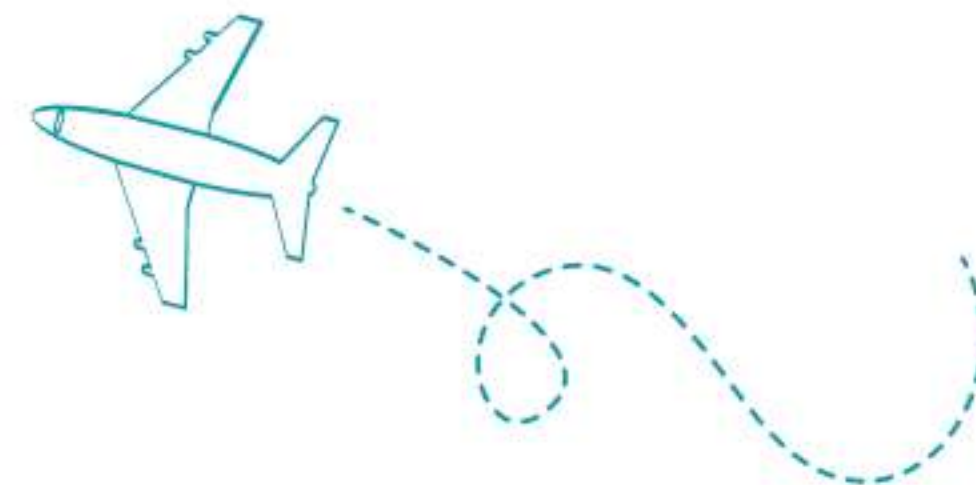

# User Profile

The user can edit their profile name and update their picture. Some more features like multi language support and notification control can be accessed. There are general settings which display contact and about us which shows the information of the tourism company so that users can contact the company.

# Travel Guide

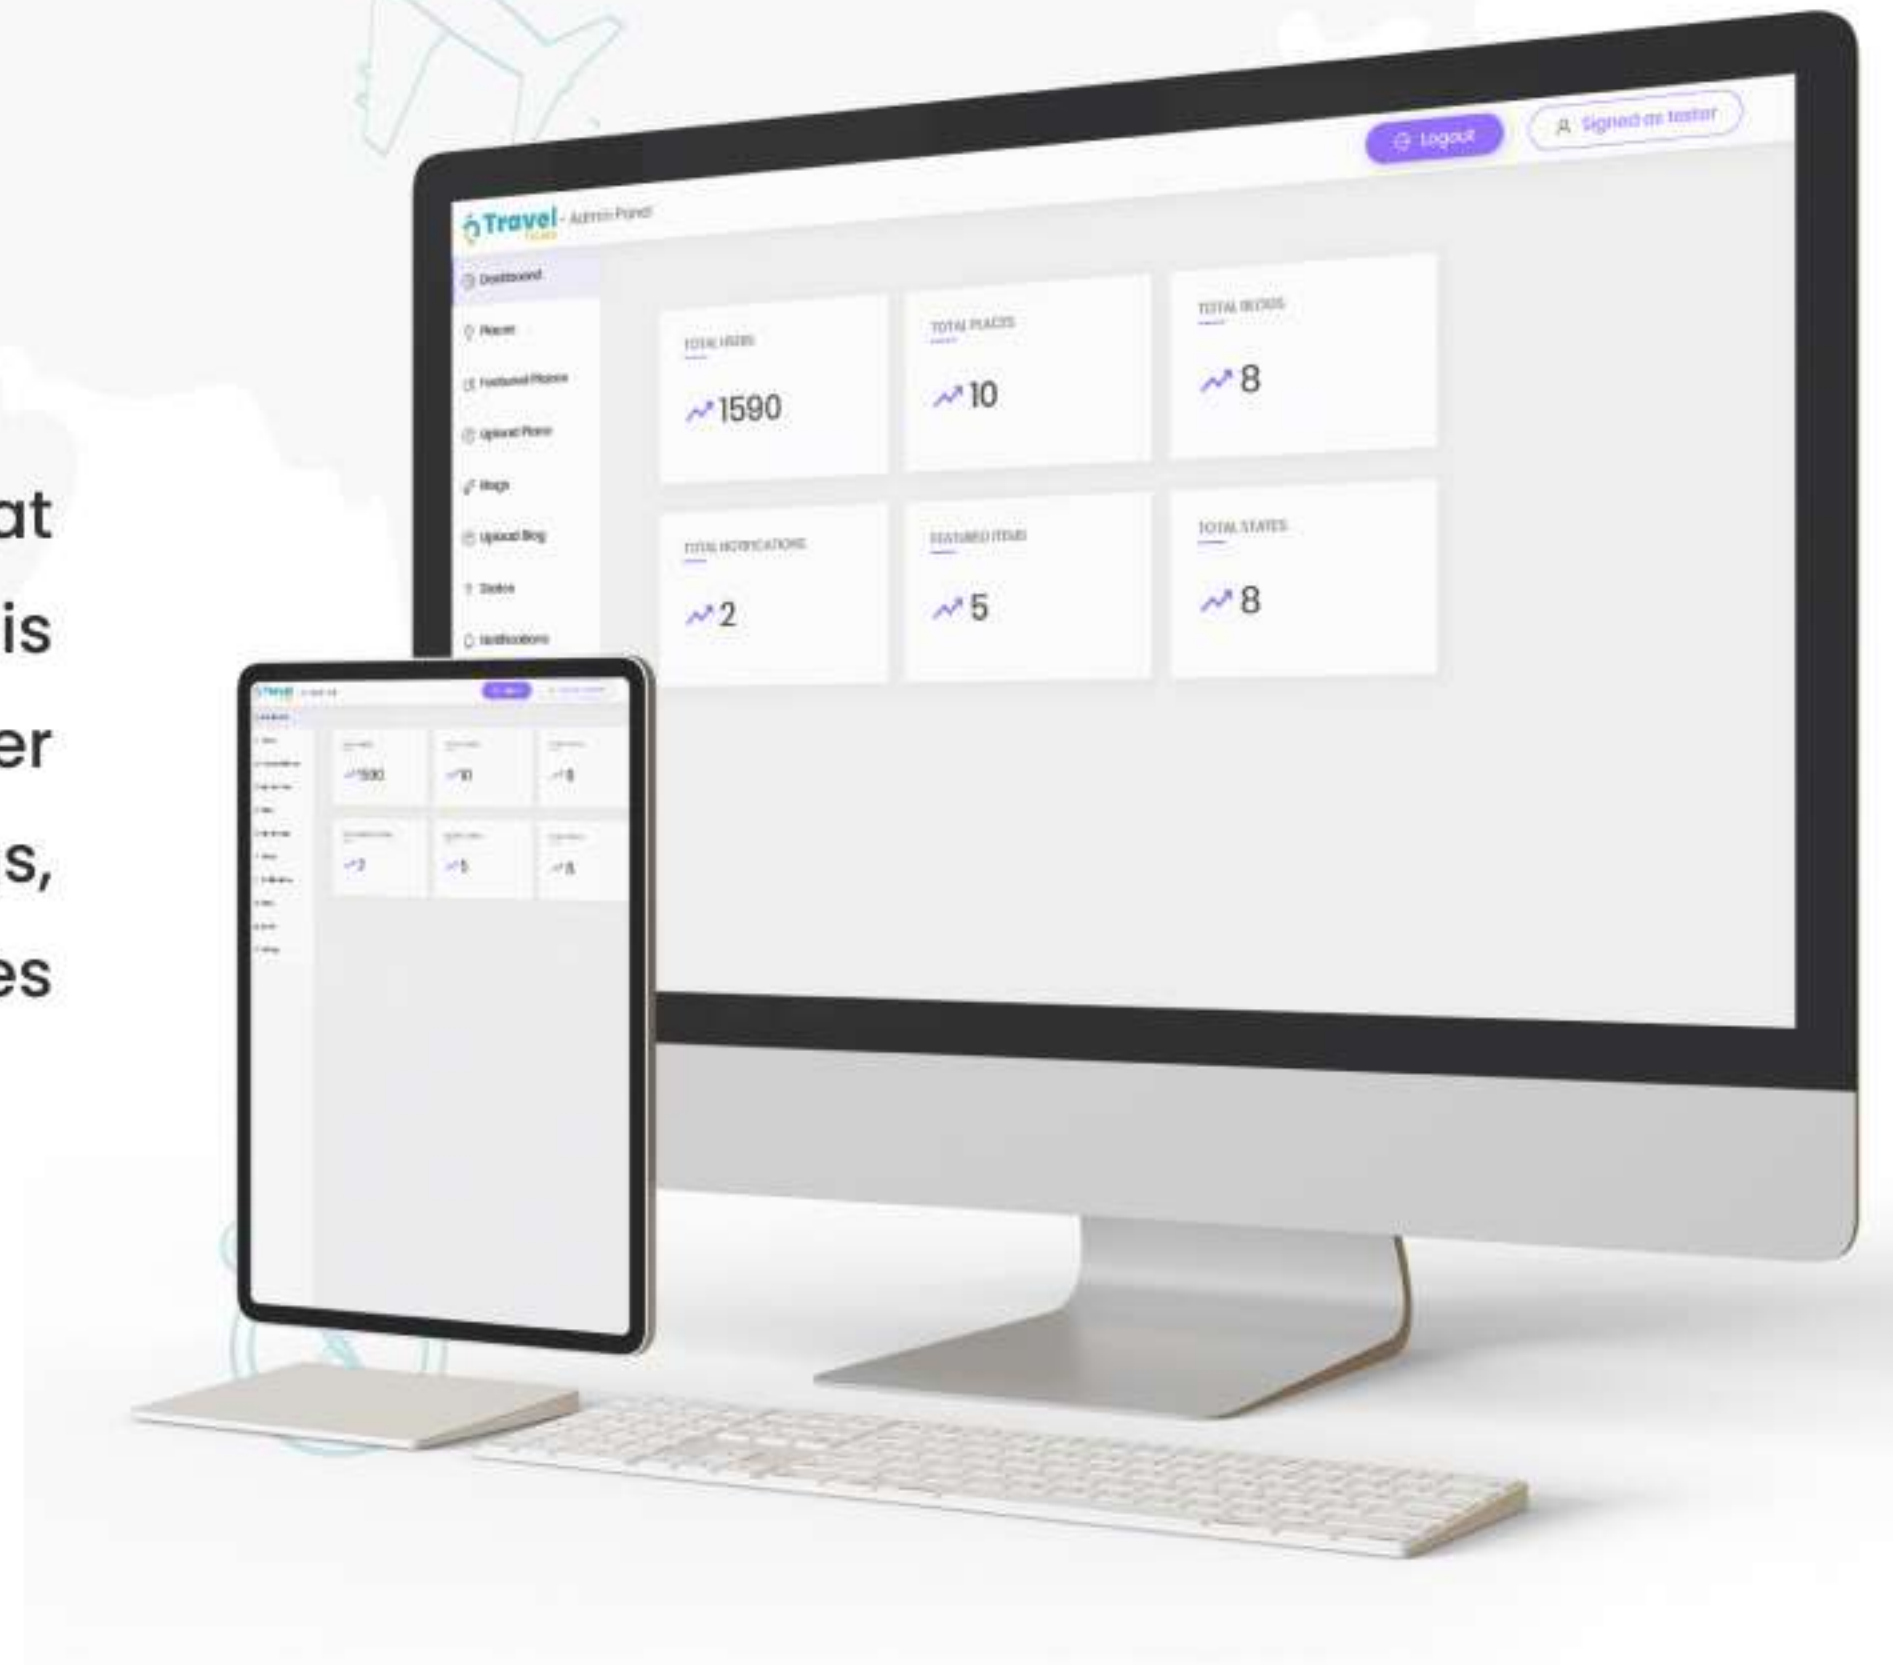

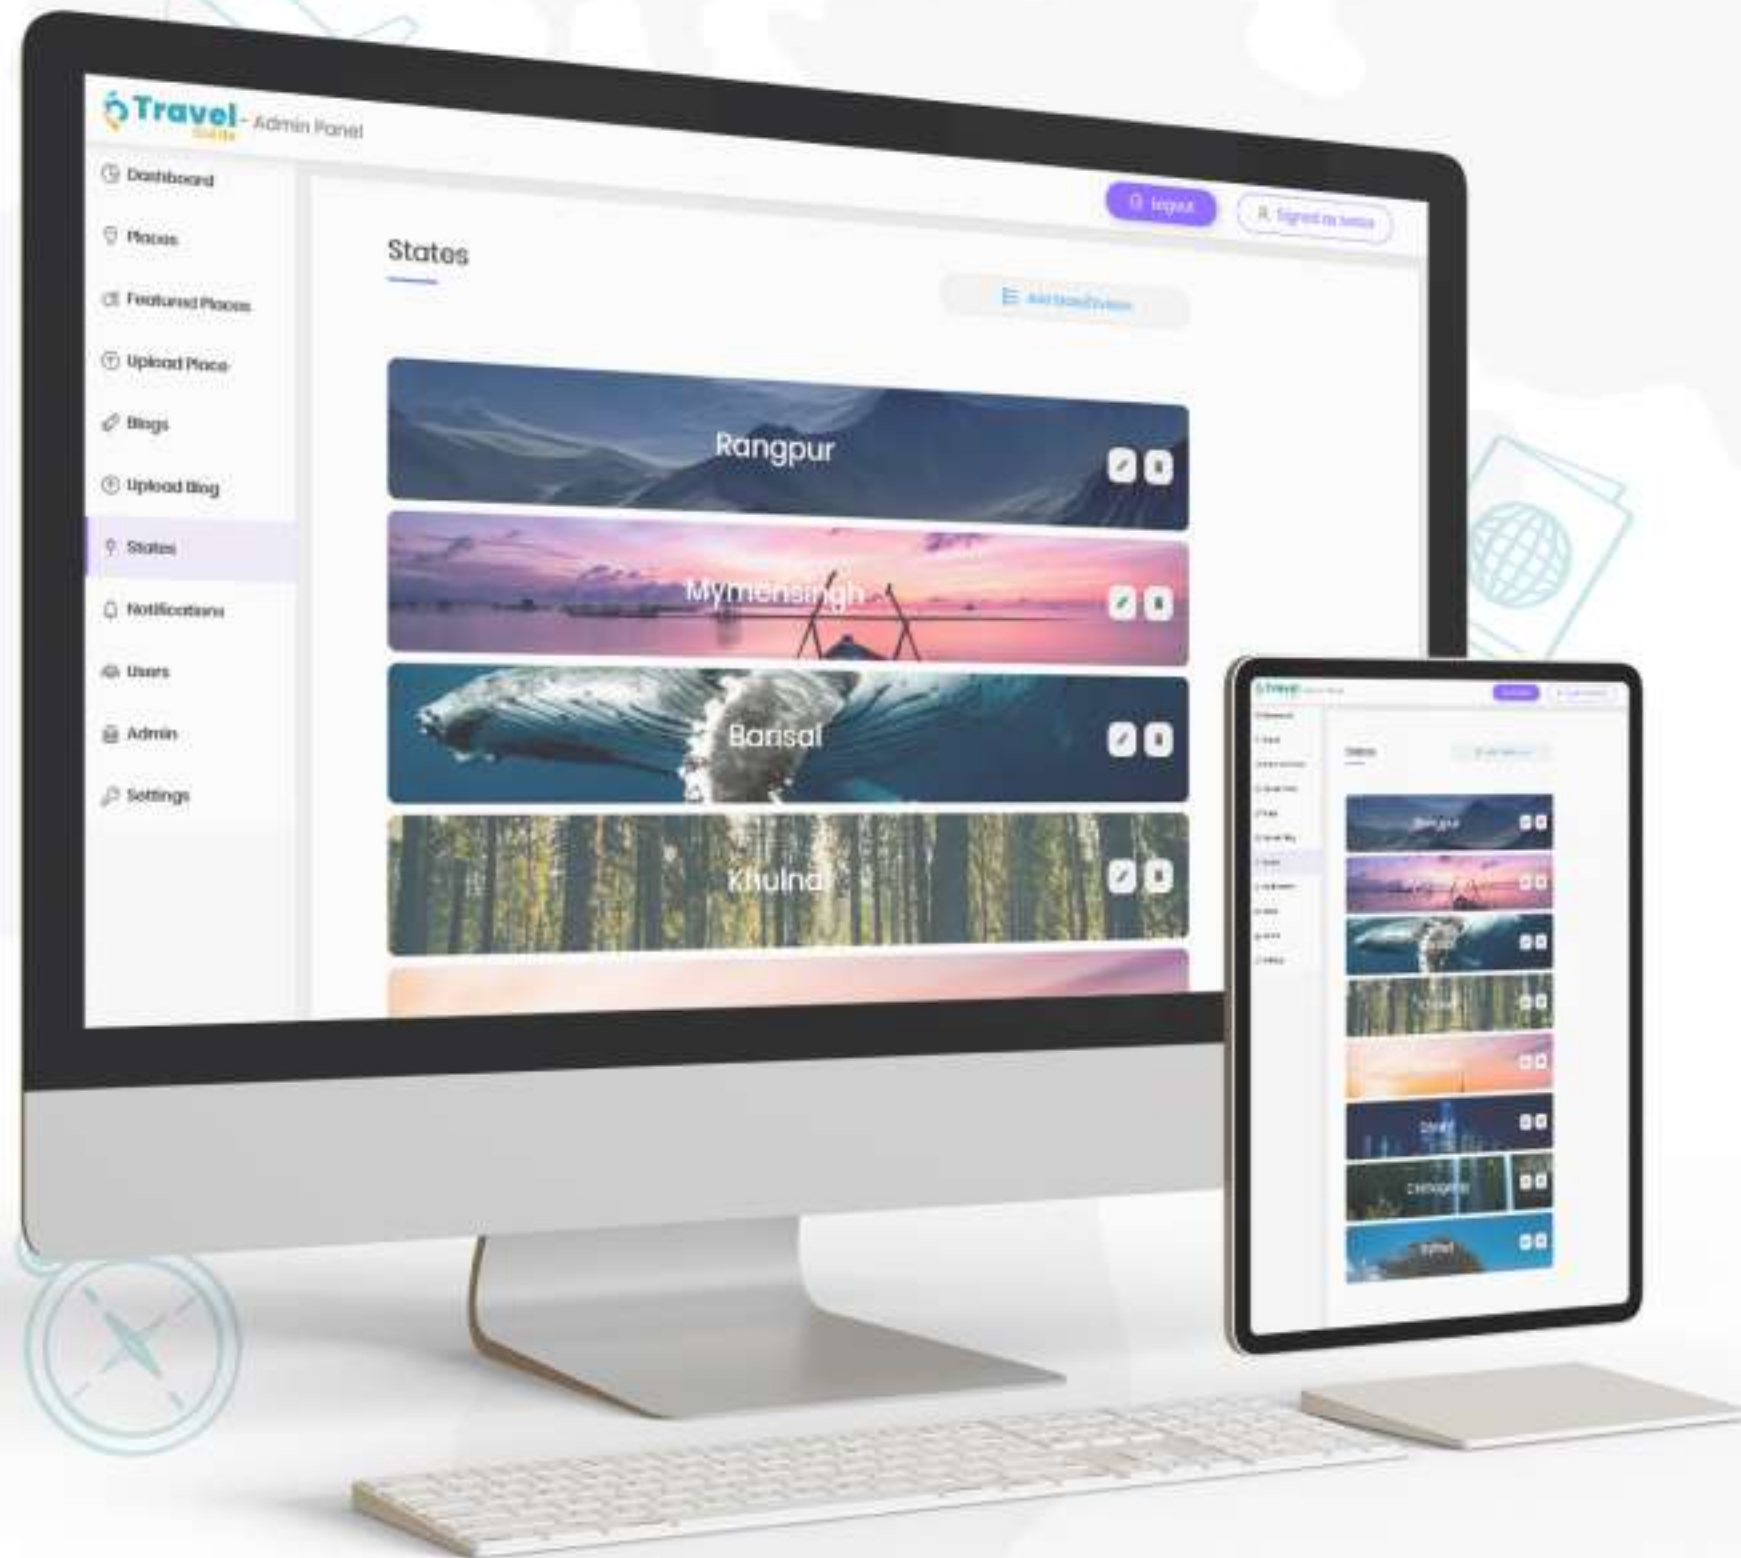

**Admin Panel**

# Dashboard

The admin can keep track of anything that happens in the application through this dashboard with realtime data of total number of users, total places listed, number of blogs, featured contents, notifications, categories etc.

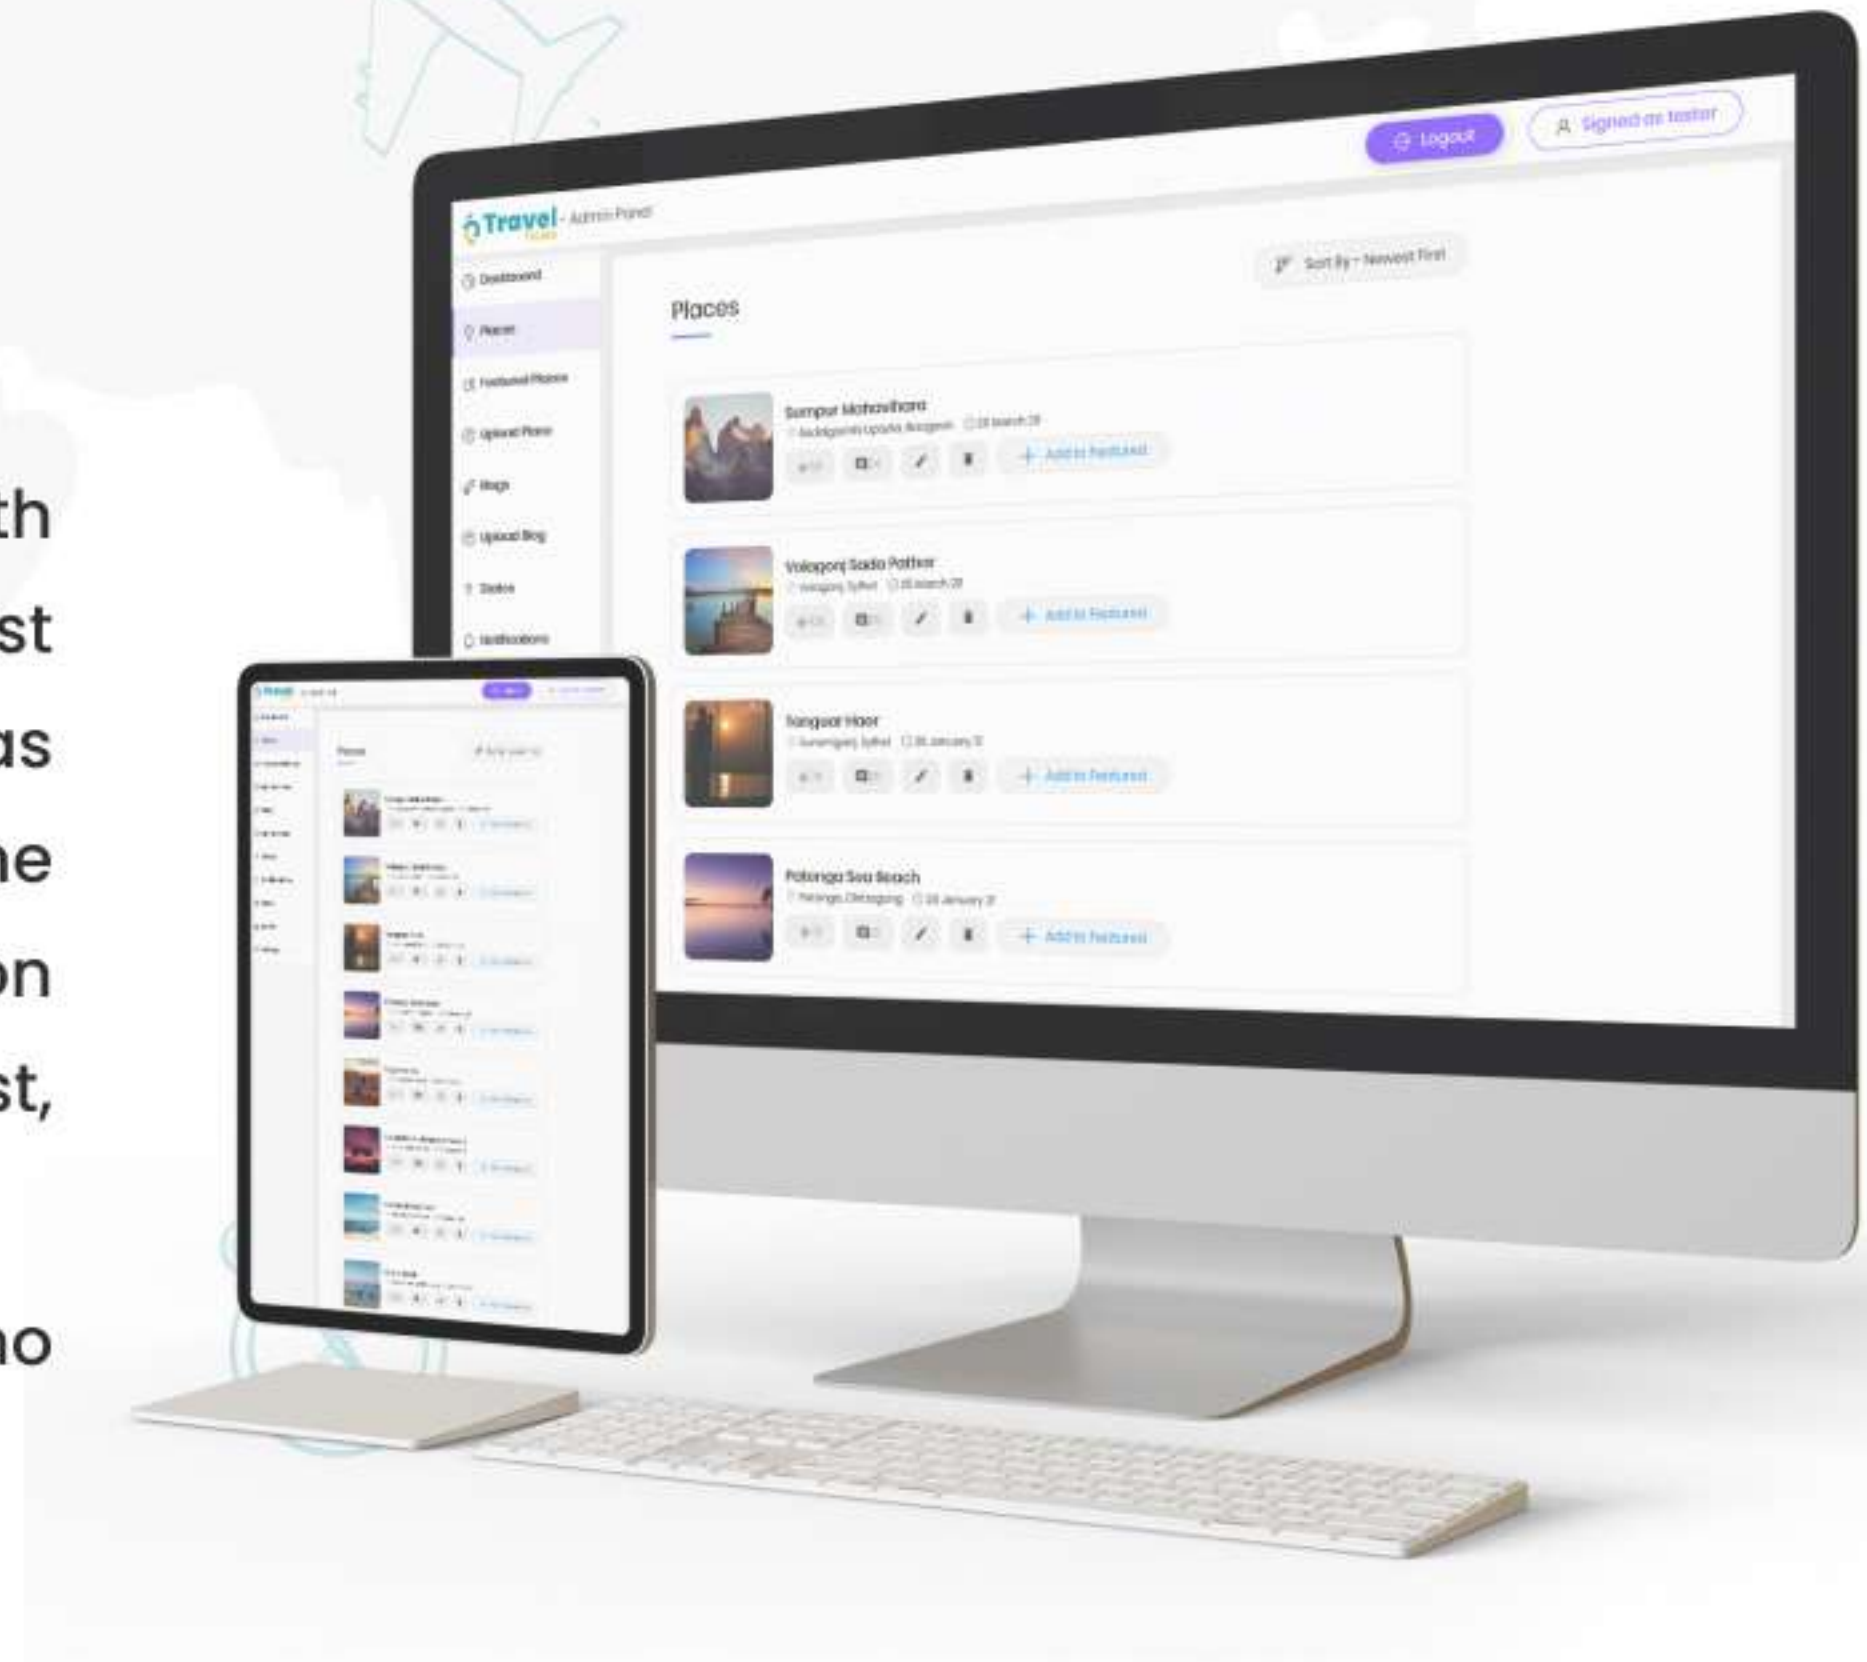

## Destinations Listing

The destinations listing can be added, deleted or updated by the admin which will ultimately reflect in the user application. Admin can simply provide the name and images of the destination which will then display in the list.

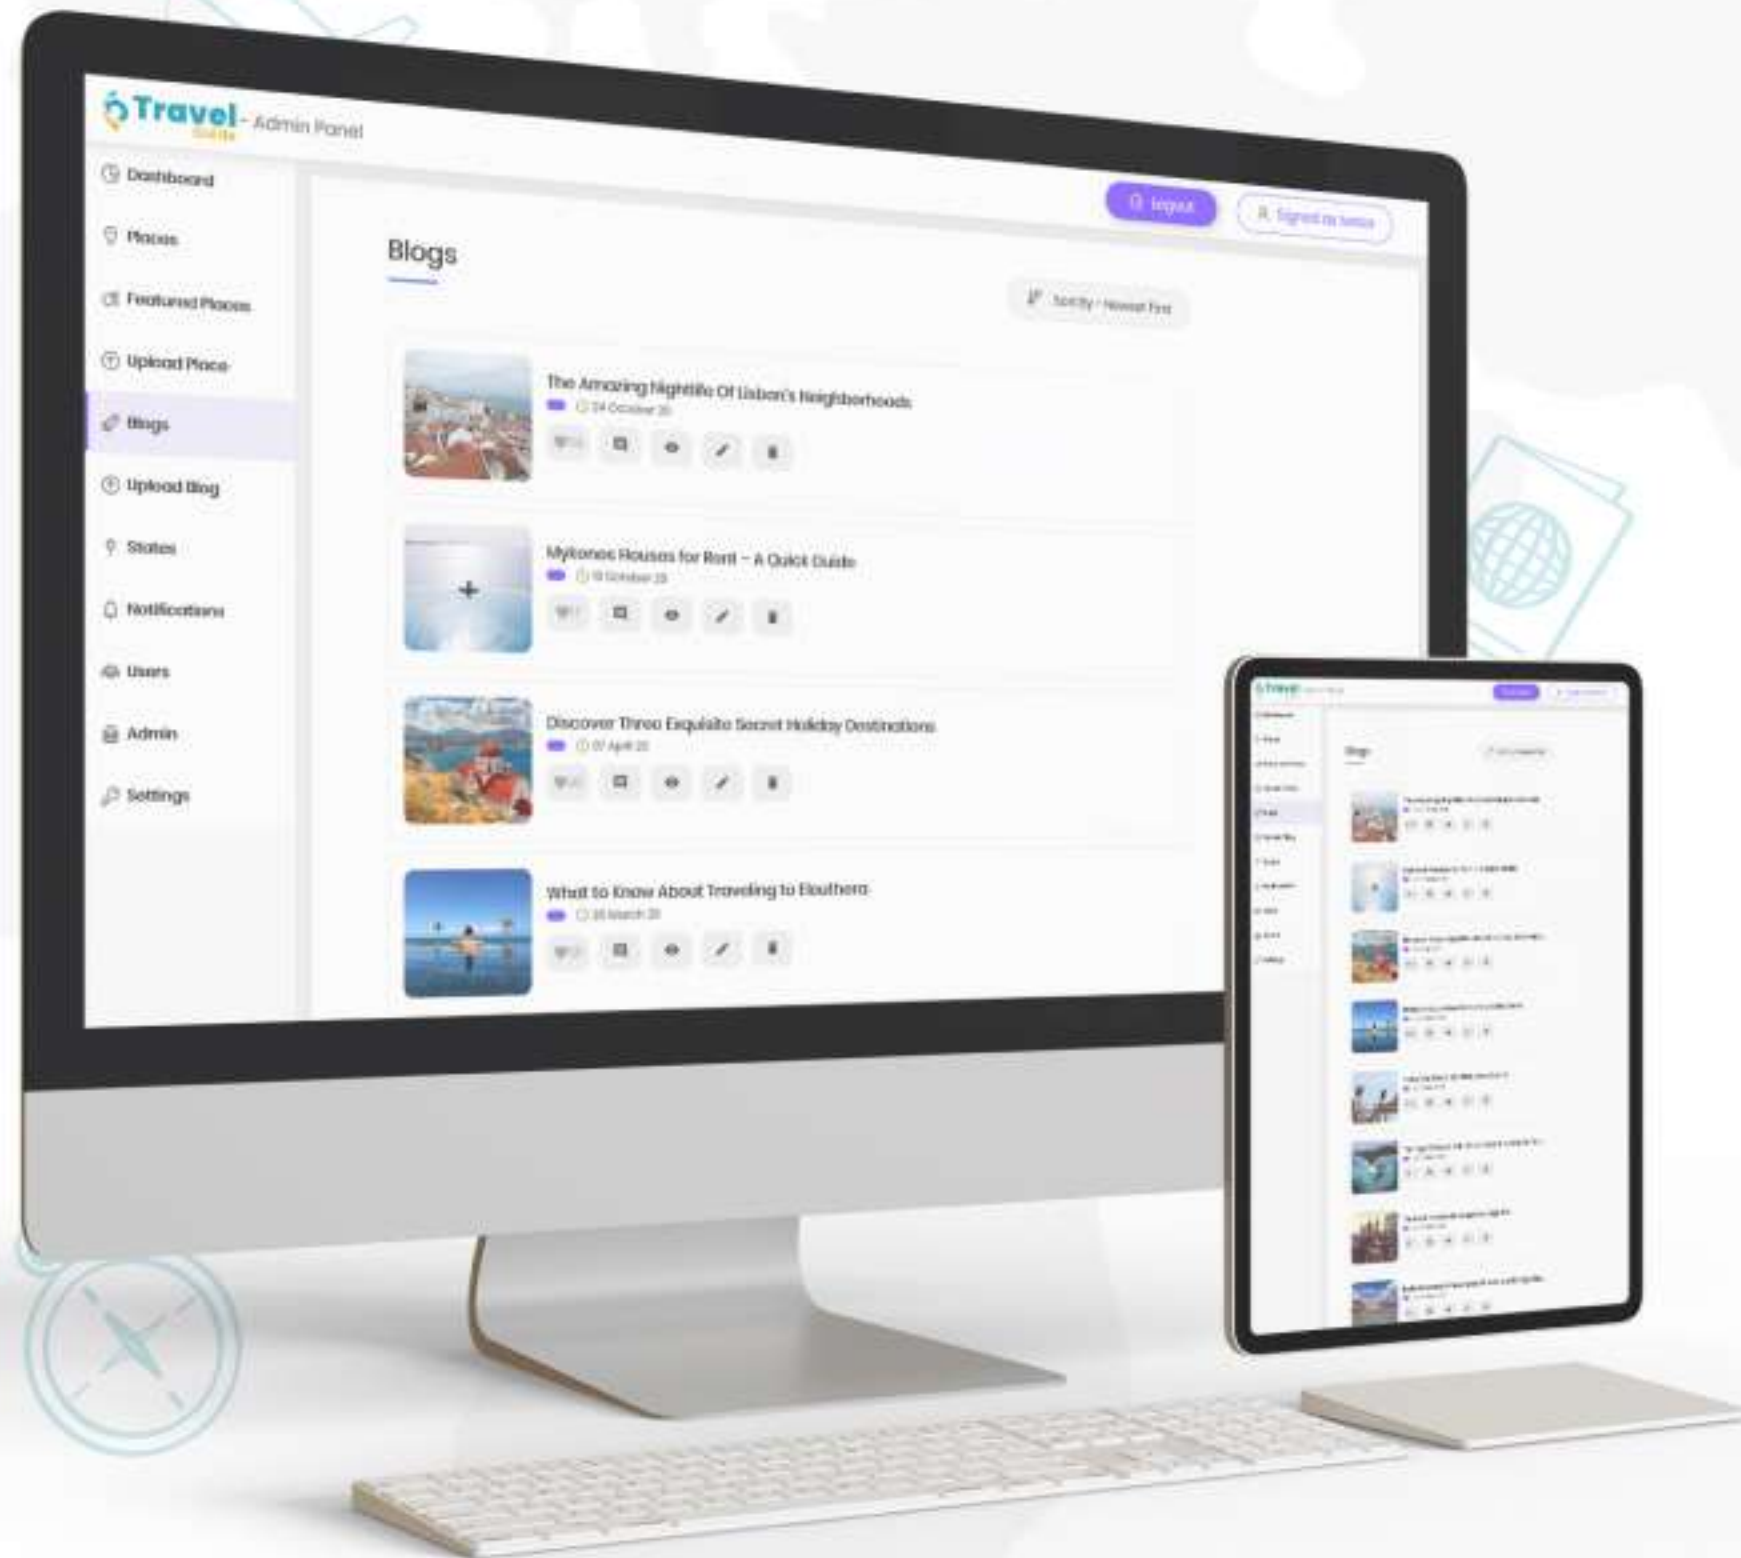

# Place Listing

The admin can manage the places with operations like add, delete, edit. The most trending or visited places can be added as featured place which will also reflect in the user application. Additionally sorting function will provide different options like newest first, oldest first, most popular etc.

Admin can also check the list of users who commented and liked the places.

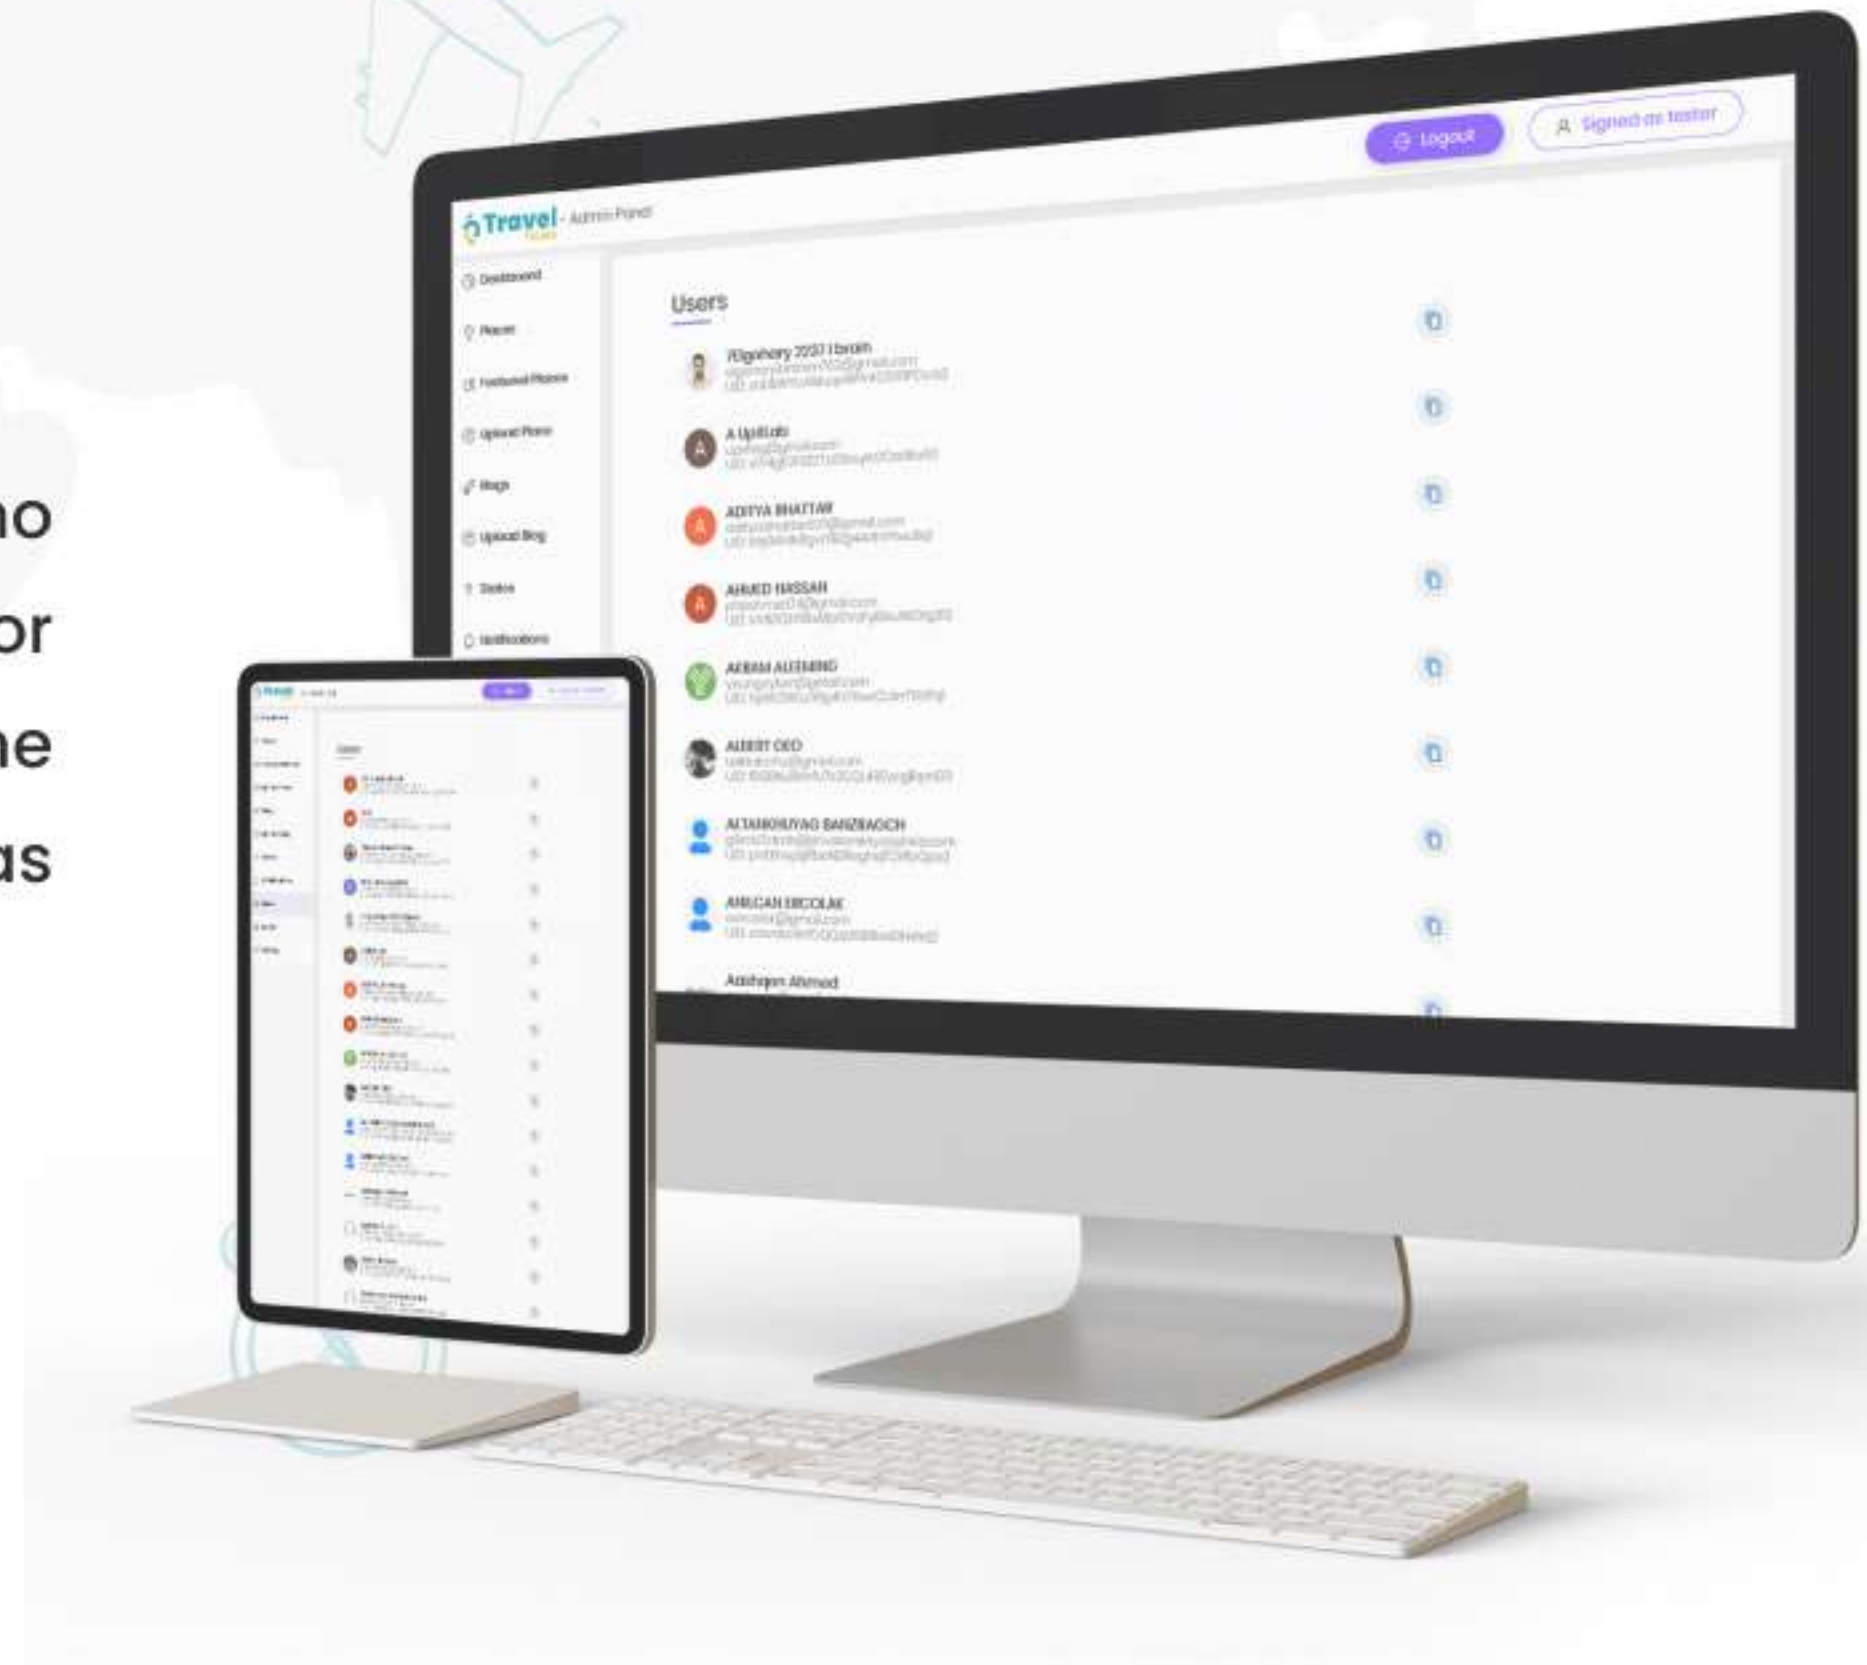

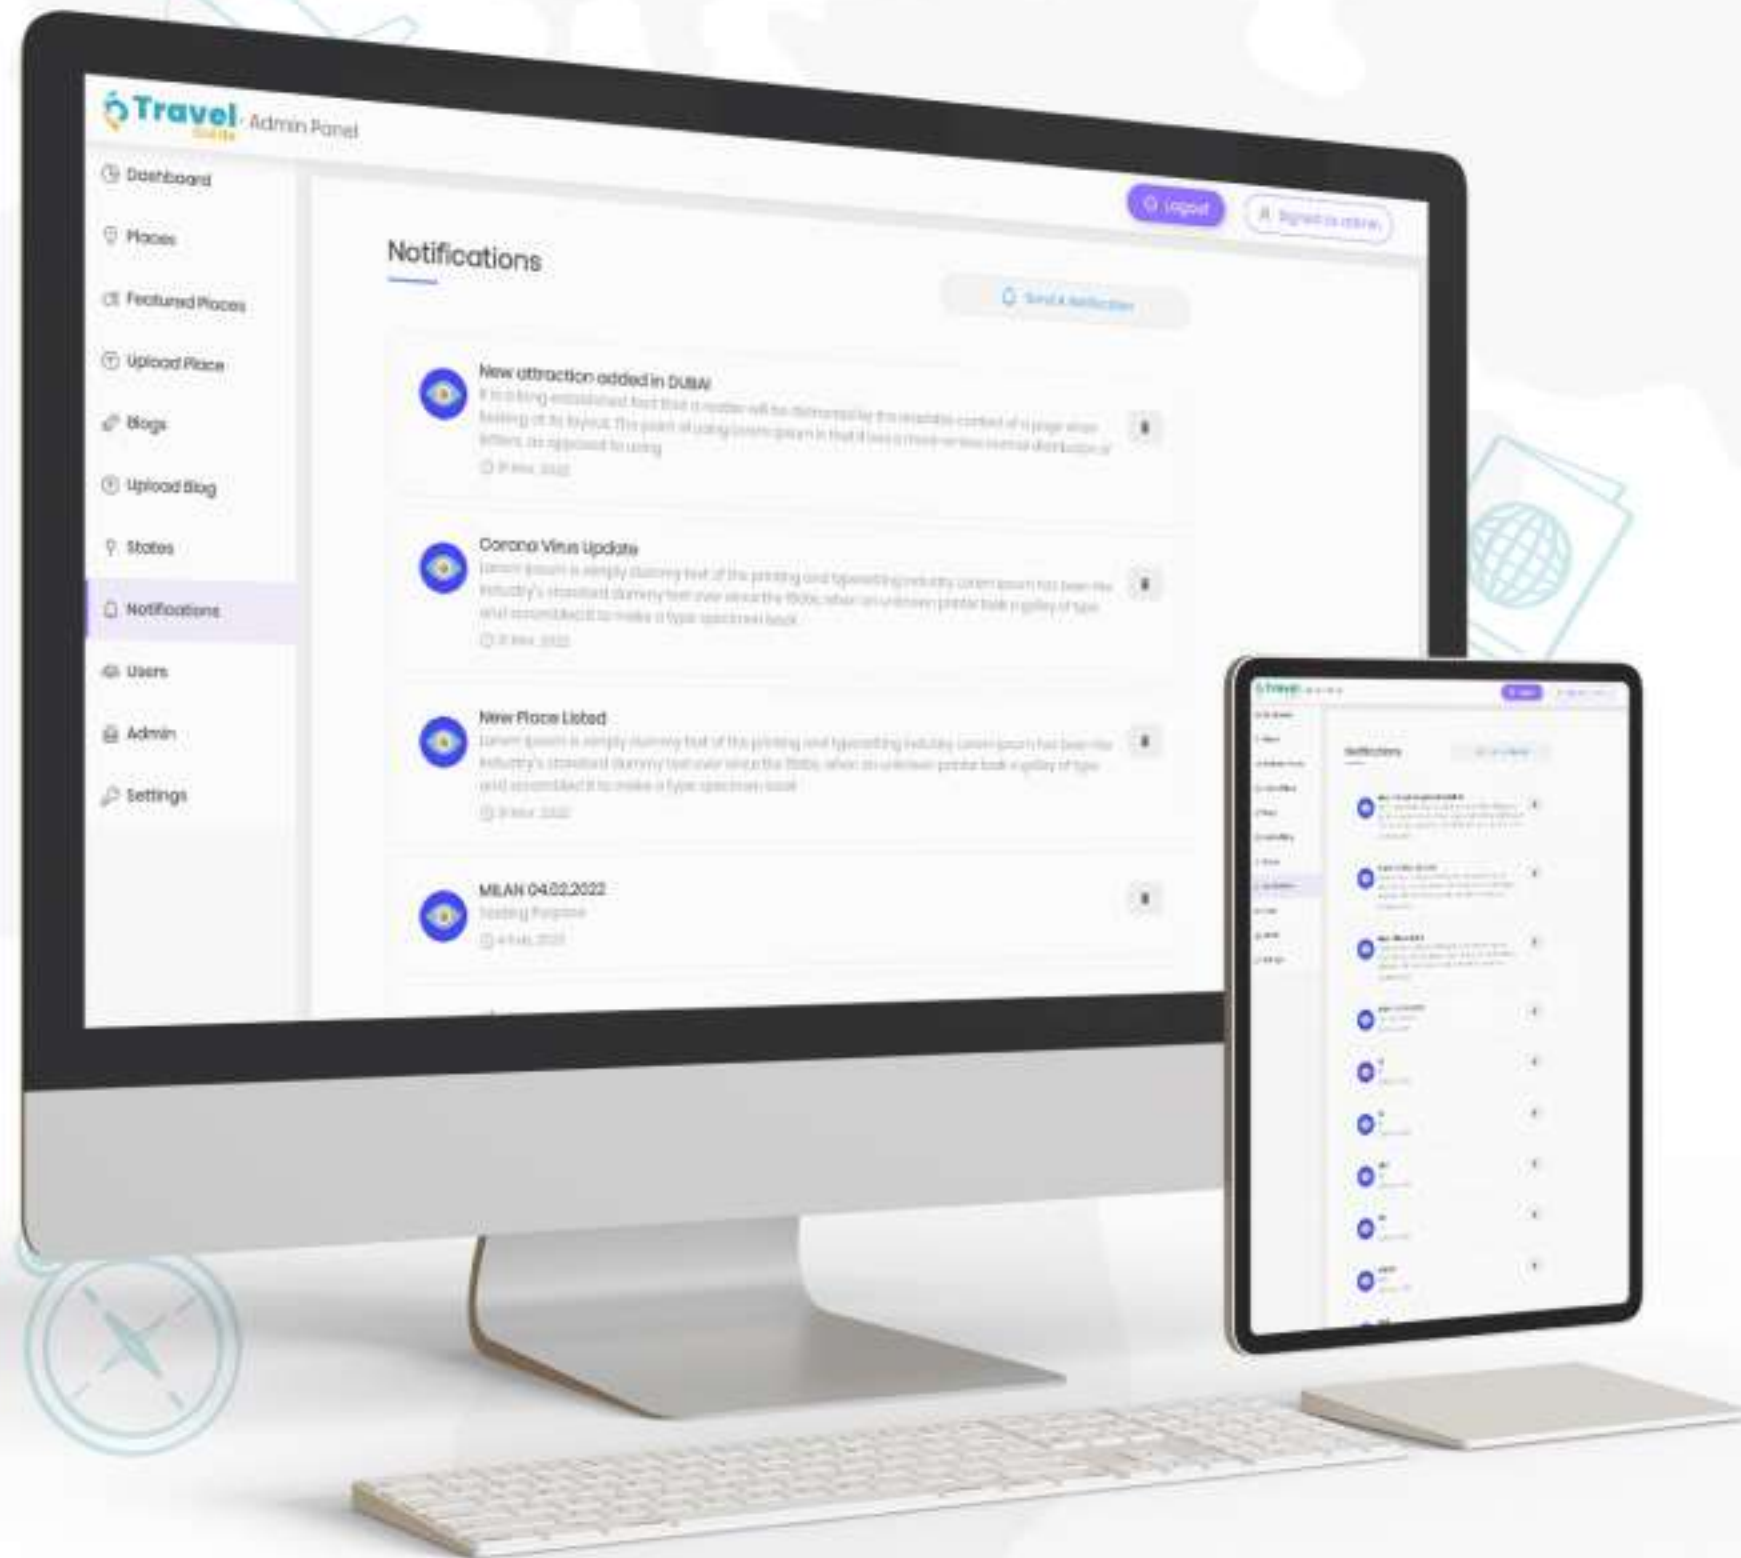

## Blogs

The admin has the access to every content with a real-time preview feature. Add, delete or update the blogs which are published can be managed. The users can like or comment on the blogs which are directly updated in the admin panel.

# Users

The user panel shows the list of users who have login to Travel Guide through website or application. Admin can also delete the undesired user reviews, make comments as admin, change password and much more.

# Notification

The notification can be send by admin to the existing users where the notification can be with any information, news or updates regarding places or application. The notification will be delivered to all the users by default.
